

SOHEIL ASAMI ESFAHANI

Senior Full-Stack TypeScript Developer · React · Node.js · PostgreSQL

✉ info@soeil.net | 🌐 www.soeil.net | in linkedin.com/in/soheil-asami | Available Immediately

PROFESSIONAL SUMMARY

I started my career teaching TypeScript, OOP, and clean architecture before I had a degree. That forced a depth of understanding that most developers build over years of trial and error. It set the tone for how I approach every codebase since: own the whole thing, understand it fully, leave it better.

6+ years building production applications end-to-end — **React · Next.js · Node.js · Express · PostgreSQL · TypeScript (strict throughout)**. At Tribes Digital I'm embedded inside client teams in Ireland and the UK, taking ownership of entire features from API schema to UI delivery. I also co-founded Mirana (VioraHR) in Canada — solo-architected the full stack, shipped to both stores, scaled to 5 enterprise clients.

I don't specialise in one layer. I'm equally comfortable designing a PostgreSQL schema, writing a Node.js service with proper auth flows, building a React component system, and wiring the CI/CD that keeps it all shippable. Self-taught, fully accountable, and genuinely invested in the quality of what I hand off.

CORE SKILLS

FRONTEND	BACKEND	MOBILE	SECURITY & INFRA
▶ React 19 · Next.js · TypeScript (strict) ▶ Angular 17 · Vue.js · Svelte ▶ Vite · Tailwind CSS · PWA ▶ WCAG 2.1 · Core Web Vitals	▶ Node.js · Express · NestJS ▶ Strapi 5 · REST · WebSocket ▶ PostgreSQL · Firebase · MongoDB ▶ OpenAI API · FCM · AWS · S3	▶ React Native · iOS · Android ▶ App Store Connect · Gradle ▶ Flutter · Dart · GetX ▶ Detox · Jest · E2E Testing	▶ OAuth 2.0 · JWT · Auth flows ▶ Docker · CI/CD · Git ▶ Railway · Vercel · Netlify ▶ IoT · Secure API design

Patterns & Practices: MVVM · MVP · MVC · OOP · Clean Code · Repository · Atomic Design · Compound Components · Custom Hooks | Agile/Scrum · Git · CI/CD · OAuth 2.0 · JWT

PROFESSIONAL EXPERIENCE

Senior Full-Stack TypeScript Developer · Tribes Digital, Remote — Ireland & UK

Sep 2023 – Present

Embedded remote developer inside client engineering teams. I own complete features — from data model to deployed UI — across multiple independent client projects.

Chupachups — AR Brand Activation Platform · Sole Developer

- ▶ **TypeScript strict:** entire system — React 19 frontend, Strapi 5 CMS, PostgreSQL schema — written with strict mode, shared type contracts between layers
- ▶ Built a real-time AR camera pipeline using MediaPipe (face detection, landmark tracking) with virtual backgrounds and mask overlays via Fabric.js canvas
- ▶ Architected a headless CMS so campaign managers swap brand assets — colours, fonts, copy — with zero code changes; runtime CSS custom property injection
- ▶ PWA with offline support, service worker caching, and kiosk-mode UX — deployed to live touchscreen event hardware across the UK
- ▶ WCAG 2.1 AA compliant — keyboard navigation, contrast compliance, screen reader support

Stack: React 19 · TypeScript (strict) · Vite · Tailwind CSS · MediaPipe · Fabric.js · Strapi 5 · Node.js · PostgreSQL · Railway · Vercel

Princess Yachts — VR 3D Yacht Catalogue · React Native

- 3-year maintenance engagement — deep enough to understand the intent behind code I didn't write, and confident enough to refactor it when needed
- **Core Web Vitals:** improved LCP through optimised asset caching, reduced TTI via lazy-loaded routes and deferred non-critical assets — 30% faster load overall
- Kept the app stable across multiple iOS/Android OS updates and API deprecations without regressions

 [Website: princessyachts.com](https://princessyachts.com)

Stack: [React Native](#) · [TypeScript \(strict\)](#) · [Redux](#) · [iOS](#) · [Android](#)

ScoreMy — Financial Advisor Web Platform

- Frontend development on a score-based financial advisory platform — interactive gauges, PDF generators, scorecards, responsive dashboards
- Integrated FCM for real-time push notifications delivered across web and mobile simultaneously

 [Website: scoremy.co.uk](https://scoremy.co.uk)

Stack: [Svelte](#) · [TypeScript](#) · [Firebase](#) · [FCM](#) · [REST APIs](#)

Manna Drone Delivery — Runner App · React Native

- Built the runner-side app for Manna's live drone delivery service — real-time Firebase order sync, location tracking, handoff confirmation
- Handled edge cases that only appear in production: offline states, failed handoffs, hub availability conflicts

 [Website: manna.aero](https://manna.aero)

Stack: [React Native](#) · [TypeScript](#) · [Firebase](#) · [WebSocket](#) · [iOS](#) · [Android](#)

Flutter Developer · SeeYoo Health (via Tribes Digital), Remote — UK

May 2024 – Sep 2024

Digital triage platform — AI assesses patient urgency and books appointments with online or in-person GPs. Replaces the first clinical pathway layer for minor and moderate conditions.

- Responsible for UI architecture and design pattern implementation across the patient journey — symptom entry to triage result to appointment booking
- Standardised MVP architecture and GetX state management patterns across the dev team — reduced screen inconsistency between developers

 [Website: consiliaris.co.uk](https://consiliaris.co.uk)

Stack: [Flutter](#) · [Dart](#) · [GetX](#) · [MVP architecture](#) · [TypeScript](#) · [iOS](#) · [Android](#)

Fullstack Developer & Co-Founder · Mirana (VioraHR), Canada (Remote)

Jun 2024 – Present

AI-powered HR attendance and communication platform — configurable workflows, attendance automation, and internal communication for organisations ditching legacy HR infrastructure.

- Solo-architected the entire TypeScript stack: React Native app, Node.js/Express backend, PostgreSQL schema, Metabase analytics, OpenAI API integration
- **Full release lifecycle:** App Store Connect, Gradle builds, signing, versioning, and staged rollouts to both iOS and Android — managed independently
- Shipped multilingual MVP (EN/FA/FR) — 5 enterprise clients across HR, fintech, and operations within year one
- Integrated FCM and AWS for push delivery and cloud storage; OpenAI API for personalised HR assistant

Stack: [React Native](#) · [Node.js](#) · [Express](#) · [PostgreSQL](#) · [TypeScript \(strict\)](#) · [OpenAI API](#) · [FCM](#) · [AWS](#) · [App Store Connect](#) · [Gradle](#)

Frontend Developer · DemisCo, Isfahan

Aug 2023 – Jun 2024

Core contributor to ACoreX — an Angular UI framework with 100+ components, built from scratch to replace fragmented enterprise libraries lacking RTL support, localisation, and performance.

- Wrote the component library itself: reusable Angular 17 components with RTL support, dark/light theming, and enterprise performance — not consuming it, building it
- Led the form builder module — datetime pickers, country selectors, chip inputs, dialog systems — ACoreX's most complex subsystem
- **Impact:** 100+ components · 2,700+ weekly npm downloads · integrated in 10+ enterprise projects
- Improved data sync using a hybrid REST/WebSocket approach with Firestore for real-time updates

 [Website: ui.acorex.io](https://ui.acorex.io)

Stack: [Angular 17](#) · [TypeScript \(strict\)](#) · [RxJS](#) · [REST](#) · [WebSocket](#) · [Firestore](#)

React Native Developer · POTS by SGTL — Contract, Remote (UK)

Mar 2023 – Jan 2024

Community gardening platform — plant care via external APIs, community features, and an online gardener onboarding panel.

- Built the full React Native app from scratch and designed the Node.js REST/WebSocket backend
- UX focus on non-technical users — the gardeners, not developers

 Website: potsbysgtl.com

Stack: [React Native](#) · [TypeScript](#) · [Node.js](#) · [REST APIs](#) · [Firebase](#)

Software Developer Team Lead · Matin-Ramz-Negar Group, Isfahan

Sep 2022 – Mar 2023

- Led 3-person team building Ramzineh — multi-platform attendance system with IoT remote layer, built to banking-grade security standards
- **Auth architecture:** OAuth 2.0 and JWT — secure token flows, refresh strategies, and role-based access across web, mobile, and IoT endpoints
- Introduced Scrum standards — improved delivery speed by 15%

Stack: [React Native](#) · [Node.js](#) · [TypeScript](#) · [OAuth 2.0](#) · [JWT](#) · [IoT](#) · [Agile/Scrum](#)

Senior Full-Stack Developer · Kherad Fan-Avaran Anahid Co., Isfahan

Aug 2019 – Nov 2022

Led a new R&D department modernising legacy HR systems — replacing hardware attendance infrastructure with secure, automated web and native applications.

- Built a full HR and work management system from scratch — attendance automation, HSE/OHS compliance, native mobile app
- Championed automated testing across the team — production bug rate dropped significantly within two sprint cycles

Stack: [React Native](#) · [Node.js](#) · [REST APIs](#) · [TypeScript](#) · [Automated Testing](#)

Junior Developer · Kherad Fan-Avaran Anahid Co., Isfahan

Jun 2018 – Mar 2019

Where it started — production code from week one, not tutorials.

- Contributed to real production modules from day one — learned why naming, consistency, and readability matter when someone else maintains your code tomorrow
- **TypeScript strict + CI/CD:** adopted early — understood that maintainable code isn't a style preference, it's what lets a team move fast without breaking things
- Introduced the team's first automated tests; introduced OOP principles and Clean Code as habits from debugging code that violated all of them

Advanced Programming Teacher · Ministry of Education — Vocational School, Isfahan

Jun 2017 – Jun 2019

Civilian service as a programming teacher — two of the most formative years of my career.

- Taught OOP, HTML5, JavaScript, and clean code — teaching forces genuine mastery in a way that development alone rarely does
- Ran concurrently with a part-time developer role — building in the evenings what I was teaching in the mornings

Stack: [JavaScript](#) · [HTML5](#) · [OOP](#) · [Clean Code principles](#)

OPEN SOURCE PROJECTS (IN PROGRESS)

Packaging production-proven tools into open-source libraries — extracted from real client work, not side projects. Releasing at github.com/soheil-asami

react-native-face-canvas

[React Native](#) · [TypeScript](#) · [MediaPipe](#)

Drop-in AR camera module: face detection, landmark tracking, virtual backgrounds, canvas mask overlays. Production-tested at live UK brand activations.

strapi-giveaway-engine

[Strapi 5](#) · [Node.js](#) · [PostgreSQL](#)

Fraud-proof prize engine with atomic stock control, one-play-per-device enforcement, CMS-managed win rates. Zero double-awards in production.

cms-token-theme

[React Native](#) · [TypeScript](#) · [CSS Vars](#)

Runtime brand theming: inject design tokens from any headless CMS, switch entire brand identities without rebuilding. Used at live events across the UK.

EDUCATION

Bachelor of Engineering — Electronic Engineering
Islamic Azad University, Isfahan · Graduated 2017

LANGUAGES

English B2 — Professional working proficiency
Persian Native

WHAT COLLEAGUES SAY

<i>"His ability to find robust solutions for complex problems is second to none. A true team player — always ready to assist and motivate."</i> Ed Clinkett CTO, SeeYoo Health (UK)	<i>"Clean, efficient code and a problem-solving mindset. His expertise in React, React Native and JavaScript ecosystems was evident in every project."</i> Mo Meshkani Technical Recruiter, Tribes Digital	<i>"Reliable, dedicated, and approaches every task with enthusiasm and precision. His ability to learn new technologies quickly is truly impressive."</i> Hosein Mohazebi Software Engineer, DemisCo
